

	Flexi 2000 Series	
	INTRODUCTION AND OVERVIEW	
<p><i>Flexi 2000</i> as the name suggests, is a flexible integrated suit of modules developed in state-of-the-art technology using ORACLE RDBMS and Developer/2000 tools. Flexi is available for various lines of business like Manufacturing, Distribution, Trading, Bank, Automobile etc It is an optimized client/server implementation giving a Graphical User Interface (GUI) to users. This is a fully parameterized software which can be tailored to meet individual company's needs without re-programming.</p>		
<p>Flexi is a multi-company, multi-division, multi-branch, multi-location, multi-currency based application which covers the entire area of operations for organization, such as financial management, purchase management, stock control, sales management, Production and fixed asset management.</p> <p>Flexi is developed in ORACLE RDBMS and can be implemented on a wide range of hardware and operating systems. ORACLE, is the leading OPEN system application development environment today, thus ensuring that your investment in time and money on the application software is secure.</p>		
<p>Investment made in Flexi today, is protected in the long term, and provides you the flexibility to adapt the latest available hardware technology at all times.</p>		
<p>Some of the main features of <i>Flexi</i> are</p>		
<ul style="list-style-type: none"> * Consistent appearance of the screens (GUI based) and color standards for nature of data * Customizable menus * Program selection through menu option or direct fast path * Extensive look-up facility with name search * On-line information availability * Historical information availability over long periods of time limited only by disk space * Document downloading facility to eliminate data duplication * Complete work-flow engineering to meet individual company's requirements * User / Terminal based security * Multi Currency supported in all the modules * Query across the modules 		
<p>SYSTEM OBJECTIVE</p>		
<p>The main objective of the system comprises</p>		
<ul style="list-style-type: none"> * Streamlining the purchasing process, accounts payable and payments processing for all types of purchases including inventory items * Streamlining the inventory control, perpetual inventory and production functions by introducing standards Bill of Material based or actual raw material consumption * Streamlining the sales, accounts Receivable and receipts processing functions * Streamlining the raw material requirement planning process * Automating the General Ledger and providing highly flexible & user definable reporting mechanism * Automating the Fixed Assets Management * Integration through smooth interfaces between different functional modules to meet the global information requirements of the management provided by our 'Generalized Inquiry' and user friendly across the module on-line navigation. 		

MODULAR APPROACH		
In order to achieve the objectives stated above, the system has been designed in a modular fashion.		
Our customer can select the required modules for automating their business function. Flexi 2000 auto searches the installed modules and provides total integration between them.		
The modules comprising the Flexi 2000 system are :		
* INVENTORY		
* GENERAL LEDGER		
* ACCOUNTS PAYABLE		
* PAYMENTS PROCESSING		
* PRODUCTION		
* SALES		
* ACCOUNTS RECEIVABLE		
* RECEIPTS PROCESSING		
* FIXED ASSETS MANAGEMENT		
* PAYROLL & HRMS		
* GL REPORT WRITER		
USER INTERFACE		
Since the system is meant to be used by non computer people, the user interface has been designed to be extremely friendly. The entire user interface is based on the state of the art GUI (Graphic User Interface) technology wherein most of the jobs in the system can be accomplished at the click of a mouse button, except where users have to enter text or numerical information into the database.		
Main User interface features are given below		
Different colors to indicate nature of data (Optional, Mandatory, Conditional , Display Only)		
All GUI features like Push buttons, Radio Buttons, Drop down list boxes, Check-Boxes, Scroll bars		
Full Keyboard interface support		
Extensive Lookups with find & pick facility		
Dynamic on line hints		
Alerts to advice users of unusual situations.		
List & maintain facility aids in workflow automation		
HIGHLY PARAMETERIZED		
Flexi achieves Multi-industry support and multiple work flow methods by being highly parameterized.		
The user at installation time answers simple questions about the nature of his business and the system automatically sets the required environment. Context sensitive, on-line help on all code fields has been built into the system. Most of the features in the system can be controlled by parameters that can be set up and altered at the company level, purchase type level, item type level and individual document level. This kind of parameterization gives a lot of flexibility to the system.		
These parameters can broadly be classified into two types :		
1. Parameters that are set up as per user requirements at installation time and remain fixed thereafter		
2. Parameters that can be modified even after installation to suit operational requirements		
ON-LINE INQUIRIES :		
Needed information , such as account number and open invoices, is available upon demand. You save time and minimize posting errors.		

SECURITY AND CONTROLS		
The system has very elaborate security and control mechanisms built in to enable supervisory staff to monitor and control what is going on. Some typical features are :		
* The traditional login ID and password control to access the system		
* Access to various functions in the system can be controlled both at the user/terminal level		
* Any change to any of the master information in the system can be audit trailed optionally		
* Any exceptional transactions taking place in the system are optionally logged into an exception log		
* and reports are produced during day-end for designated users/departments		
* Three authorization levels provided to control payment processing with each level or combination of levels authorization to clear a certain amount.		
* Even the usage of the authorization levels is flexible and can be setup and maintained by the administrator.		
* Program level / Option level / Sensitive field level security and special roles.		
REPORT GENERATION :		
Flexi has a very strong GL/Budget Report Generation Module , that allows the user to print customized Balance sheet, P&L statements, Cash Flow Analysis, Schedules etc., allowing the user to control the entire look and feel of reports.		
FINANCIAL YEAR : (Multi Period & Multi-Year Posting)		
Take your own time in balancing and closing a period without delaying work for the next period.		
In Flexi financial year of a company is user defined, and all the screens change in accordance. Users have option of keeping multiple years open, and can also define his own set of transactions to suit the nature of his business. Flexi is abundant with many such more flexible features .
